

Foreign Exchange Committee Releases FX Volume Survey Results

New York, July 28, 2014 – The Foreign Exchange Committee today released the results of its twentieth Survey of North American Foreign Exchange Volume. For the April 2014 reporting period, key findings are featured below.

- Average daily volume in total over-the-counter (OTC) foreign exchange instruments (including spot, outright forward, foreign exchange swap, and option transactions) was \$811 billion in April 2014. The April total was 0.6 percent lower than average daily volume during the October 2013 survey period, and 20 percent lower than a year earlier.
- Average daily spot volume decreased 9 percent since the last survey. The decline in spot volume was partially offset by growth in turnover of forwards and OTC options, which increased 14 percent and 24 percent, respectively. Swap volume remained stable with a decrease of less than 1 percent.
- The decline in volume since the last survey was driven by reporting dealers and other dealers, while turnover across other financial customers and nonfinancial customers increased.

Average Daily Volume Composition by Currency Pair, April 2014

The survey was developed in order to provide the market with frequent information on the size and structure of foreign exchange activity in North America. To achieve a representative survey, the Committee invited twenty-five leading financial institutions active in the North American foreign exchange market to contribute data on the level of turnover during the month of April 2014. The Committee also collaborated with the United Kingdom's Foreign Exchange Joint Standing Committee (FXJSC), the Singapore Foreign Exchange Market Committee (SFEMC), the Tokyo Foreign Exchange Market Committee (TFEMC), the Canadian Foreign Exchange Committee (CFEC), and the Australian Foreign Exchange Committee (AFXC), which conducted similar surveys for the U.K., Singaporean, Japanese, Canadian, and Australian markets, respectively, over the same period. The FXJSC, SFEMC, CFEC, and AFXC are releasing their survey results today. The TFEMC released its results late yesterday.

For the purposes of the survey, turnover is defined as the gross value of all new deals entered into during the reporting period and is measured in terms of the notional amount of the contracts. Survey data are broken out by four foreign exchange instruments, thirteen currency pairs, four counterparty types, and five execution methods and are reported both in terms of daily average and total monthly volume. The reporting basis for the survey is the location of the price-setting dealer. While similar in nature, the survey is not comparable to the Bank for International Settlements' Triennial Central Bank Survey of Foreign Exchange and Derivatives Market Activity, given the differences in the reporting methodologies.

The Foreign Exchange Committee is composed of individuals from institutions that participate actively in the foreign exchange markets as well as other financial markets worldwide. The Committee's objectives include 1) serving as a forum for the discussion of best practices and technical issues in the foreign exchange market, 2) fostering improvements in risk management in the foreign exchange market by offering recommendations and guidelines, and 3) enhancing the legal certainty of foreign exchange contracts through the development of standard documentation. The Committee was formed in 1978 under the sponsorship of the Federal Reserve Bank of New York.
